

# Health and Life Sciences

With the growing presence of medical higher education and research facilities in the region, we have seen an increase in our health and life sciences sector. Nearly 200 establishments in this sector have a presence in Roanoke County, with over 300 firms regionally. Our health-related companies range in size and expertise from a couple employees to hundreds, from occupational therapy using animals to medical wiring manufacturers and everything in between. With resources like Virginia Tech Carilion School of Medicine and the VTC Research Institute at their disposal, it's no wonder health and life sciences companies choose to locate in Roanoke County.
